

9 EPDM - SECTION 9 – PROTECTED MEMBRANE & COMBINATION DESIGNS

9.1 General

- 9.1.1 A protected membrane roofing design is an insulated and ballasted roofing system in which the insulation is applied above the E.P.D.M. membrane and retained in place by ballast.
- 9.1.2 A combination roofing assembly is comprised of a conventional insulated membrane system where the E.P.D.M. membrane is covered with insulation held in place with ballast.
- 9.1.3 E.P.D.M. protected membrane and combination designs are not accepted for issuance of the Warranty Certificate.
